Project 1: `in_error.json` Project 1 Output

The following output is for `in_error.json`. This assumes that `notional.json` is in the same directory as the client and server JavaScript files. This data file has two syntax errors that make it not valid json. Your program should detect that there is a problem and end gracefully in the manner shown below.

Section 1: Network tests

In one shell the command below is used.

```
node railway_network.js
```

In another shell the command below is used

```
node client_network.js in_error.json
```

The output is below.

```
Not able to parse the input file.
```
